

# Pro Select Compost

## Product Description

Pro Select Compost is a US Composting Council Seal of Testing Assurance Program participating product. (USCC STA Program)

Pro Select Compost is produced for utilization as a soil amendment for turf topdressing, as an organic amendment in the construction of turf root zones, soil amendment for landscaping planting beds, rain garden soil blends, biofiltration trenches, and custom topsoil blending. The product is ideally suited for incorporation into native soil for the purpose of increasing organic matter and beneficial microbial populations in the root zone, thereby improving soil quality, increasing soil fertility, and enhancing plant establishment and growth.

Pro Select Compost is a thoroughly composted, stable, mature, weed-free compost product. The material is derived from 100% agricultural materials including dairy (cow) manure, horse manure, and food processing agricultural residuals. It contains no MSW biosolids and no spent mushroom soil. Processing meets or exceeds all EPA standards and complies with US Composting Council's Seal of Testing Assurance standards. Pathogen reduction and weed seed elimination standards are met by exceeding EPA requirement of 131 degrees F for a minimum of 15 consecutive days. Composting method is aerated windrow with active processing for minimum of 90 days during which the windrows are turned 3 times per week. This process is followed by a 120 day curing period and screening. Compost maturity is tested and verified utilizing Solvita testing as well as seedling emergence and seedling vigor analysis.

All production, storage, and screening processes occur under roof until time of shipment for maximum product consistency and quality control. Pro Select Compost is highly consistent and is shipped at the preferred moisture level for optimum product performance and ease of handling and application.

Prior to shipment, the compost is screened to 3/8" minus.
